

MGTS Downing Active Defined Return Assets Fund

Monthly commentary

Despite continued geopolitical tensions surrounding the US/Iran conflict, April marked a reversal from the risk-off tone witnessed in March. Earnings reported this month beat expectations leading the S&P 500 to its best month since November 2020 and back to all-time highs. Emerging markets outperformed, led by strength in semiconductor supply chains particularly in South Korea and Taiwan. The VIX trended lower throughout the month led by the (somewhat fragile) progress regarding the conflict in the Middle East, with an intramonth peak at 26 pts. Central banks held rates this month due to rising inflation concerns and the long-term impact of rising energy costs.

The Fund responded well to the market recovery recording a gain of 3.68%, representing a strong outcome against a divergent equity backdrop, with the S&P 500 up 10.4% compared to a more modest gain of 1.99% for the FTSE 100.

The Fund remains 100% collateralised with UK Gilts, with an average maturity of just over six years. The Gilt portfolio is fully duration hedged, protecting the Fund from Gilt pricing swings, whilst generating a strong funding profile of SONIA +43 bps on average. The EQD portfolio continues to deliver strong performance, with one EQD swap maturing in the month generating a return of 8.65% for the Fund and successfully calling at its first call date. We reinvested proceeds selectively into new and existing positions, at yields materially above the contracted coupons.

The Fund is well positioned to take advantage of the ongoing market recovery with average weighted, defined return coupons of 9.26%. The Equity swap portfolio will remain resilient to any market downturns with risk metrics within target ranges, with an average "cover to capital loss" across the portfolio of 39.9% and a "cover to final call barrier" of 29.7%.

S&P 500 (SPX): +10.42%; Russell 2000 (RTY): +12.16%; FTSE 100 (UKX): +1.99%; Euro Stoxx 50 (SX5E): +5.60%; Swiss Market Index (SMI): +2.81%; Nikkei 225 (NKY): +16.10%; Hang Seng Index (HSI): +3.99%.

Fund overview

Over the month the Fund returned +3.68%

The Fund continues to perform as expected, with excellent diversification and downside protection combined with well-seasoned portfolio with some intrinsic value still to realise in the NAV. Performance is strong against its peer group of Defined Return Funds over 1, 3, 6 and 12 months.

Forward looking scenario analysis and intrinsic value

These scenarios are an estimate of future performance based on current equity and derivative market conditions in the portfolio composition and are subject to change. Actual performance depends on factors such as: how long you are invested and prevailing market conditions. The Fund aims to deliver long term consistent and predictable returns over a holding period of 5-6 years.

Market Move	-30%	-20%	-10%	0%	10%	20%	30%
3 months	-21.03%	-10.11%	-1.68%	2.26%	4.05%	4.96%	5.43%
1 Year	-17.14%	-5.43%	2.48%	7.96%	11.03%	11.72%	12.04%
2 Years	-12.61%	0.93%	10.82%	20.17%	21.36%	21.75%	21.65%
3 Years	-7.62%	8.85%	22.25%	33.32%	33.76%	33.48%	33.01%

Future performance may also be subject to changes in taxation. The value of investments can go down as well as up, and you may not get back the full amount invested.

Risk Considerations

The following risk factors are relevant to the overall risk profile of the Sub-fund. A full description of risk warnings is provided in the prospectus, which is available on our website, or by requesting a copy. Risks associated with the use of derivatives (FDI) for investment purposes are different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. The use of FDI requires an understanding of both the underlying reference instrument and the FDI itself. There is no assurance that any derivative strategy used by a Fund will succeed and derivatives can lead to significant losses. Defined Return Strategies (DRS) can be complicated and not readily available. There may be times and market conditions where opportunities to invest in DRS are not present at a fair price. In addition, the value of DRS is more complicated than other FDIs and therefore there can be a higher level of price uncertainty or available liquidity. DRS are usually designed to provide some protection against falls in the underlying reference asset. This means that the price of the DRS will typically fall by less than the underlying asset in most circumstances. However, there may be times when barriers that provide protection are at a higher risk of being breached. When this occurs then there is a risk that DRS may fall faster, causing greater losses, than the underlying reference asset.
